

WOD

Water on Demand

24/7 Pressure Management

Plasson's Water on Demand (WOD) allows you to easily control and manage the water pressure in all the drinker lines in your house according to your birds changing demands during a 24 hour period and during the grow-out.

Patent Pending

New!

How does it work?

By easily changing only 2 parts of the Plasson Line Pressure Regulator you can convert all the Pressure Regulators into Pressure Reducers. Now, the management of the water pressure in all drinker lines in the house is achieved from one central location, by using a minimum of 2 types of pre-set Pressure Regulators (for example, one regulator for low to medium pressures and a second regulator for medium to high pressures). This assures the same pressure in all drinker lines and a supply of the required amount of water when your birds demand it.

Manage the pressure during the grow-out

At the beginning of the growing, use the Low –Medium Pressure Regulator and increase the pressure every couple of days according to need. When reaching a medium pressure, switch to the Medium-High Pressure Regulator and continue to increase the pressure until it reaches a high pressure at the end of the growing.

Manage the pressure during a 24 hour period

Switch between the Main Pressure Regulators during the day to increase/decrease the pressure in the lines and fulfill your birds demand for water (in the following example three Main Pressure Regulators are required).

Night – Minimum Demand, Low Pressure

Morning - Peak Demand, High Pressure

Day Time – Average Demand, Medium Pressure

Twilight – Peak Demand, High Pressure

Night – Minimum Demand, Low Pressure

Plasson's WOD uses the water itself to control the pressure and does not require additional expensive infrastructure installation.

Easily retrofit every Plasson watering system. Ask your nearest dealer about **Plasson's Water on Demand** and start to save money.

Benefits

- Labor costs saving
- Maximize bird performance with optimal water supply
- Maintain dryer litter
- Uses the water itself as the control media
- No need for extra Infrastructure installation
- Easily retrofit every Plasson watering system
- Works together with the Automatic Flushing System Kit
- Easily attached to a computerized controller
- Easily manage the pressure during grow-out
- Easily manage the pressure during a 24 hour period
